

# Removable coal load for Gopher Models BCH.

A 5 minute modelling project.

You will need a pack of Gopher Models BCH coal wagons and 2 packs of N-Trains coal loads.

Let's get ready to go.

The hard part. Place the coal load on its side in the wagon, use a pencil and mark where the internal supports line up with the load.

Using a file or motor tool with cutting disk, cut 2 grooves in the base of the load.

Cut to a depth that sits the load at you desired height.

You can use the first load as a template for the rest of the loads.

Once satisfied paint coal black. If you don't glue them in you can easily remove them.

Happy Modelling

Dave Pallas.
